Carbonic acid is a chemical compound with the chemical formula H_2CO_3 (equivalently OC(OH)_2). It is also a name sometimes given to solutions of carbon dioxide in water (carbonated water), because such solutions contain small amounts of H_2CO_3 . In physiology, carbonic acid is described as volatile acid or respiratory acid, because it is the only acid excreted as a gas by the lungs.

The Virtual Lab is an online simulation of a chemistry lab. It is designed to help students link chemical computations with authentic laboratory chemistry. The lab allows students to select from hundreds of standard reagents (aqueous) and manipulate them in a manner resembling a real lab. More information and offline downloads. In the Middle Ages, hydrochloric acid was known to European alchemists as spirit of salt or acidum salis. Gaseous HCl was called marine acid air. The old (pre-systematic) name muriatic acid has the same origin (muriatic means "pertaining to brine or salt"), and this name is still sometimes used. Notable production was recorded by Basilius Valentinus, the alchemist-canon of the Benedictine ...

Hydrochloric acid - New World Encyclopedia

Hydrochloric acid or muriatic acid is a colorless inorganic chemical system with the formula $H_2O:HCl$. Hydrochloric acid has a distinctive pungent smell. It is classified as strongly acidic and can attack the skin over a wide composition range, since the hydrogen chloride completely dissociates in aqueous solution.. Hydrochloric acid is the simplest chlorine-based acid system containing water.

Preparation of Acetylsalicylic Acid Abstract Acetylsalicylic acid was prepared using salicylic acid and acetic anhydride. As a result, a white, powdery substance was formed (0.1931g, percent yield 91.30%) and was defined by melting point (124.5 - 134.5°C) and observation of color change with ferric chloride.
