In this lesson, explore the theory of differential gene expression and discover what it means in terms of how different cells are formed, how DNA...

Differential Gene Expression: Definition & Examples ...

Homologous recombination is a type of genetic recombination in which nucleotide sequences are exchanged between two similar or identical molecules of DNA. It is most widely used by cells to accurately repair harmful breaks that occur on both strands of DNA, known as double-strand breaks (DSB). Homologous recombination also produces new combinations of DNA sequences during meiosis, the process ...

Homologous recombination - Wikipedia

Lamarckism (or Lamarckian inheritance) is the hypothesis that an organism can pass on characteristics that it has acquired through use or disuse during its lifetime to its offspring. It is also known as the inheritance of acquired characteristics or soft inheritance. It is inaccurately named after the French biologist Jean-Baptiste Lamarck (1744–1829), who incorporated the action of soft ...

Lamarckism - Wikipedia

Evolution is a scientific theory used by biologists. It explains how living things change over a long time, and how they have come to be the way they are.. Earth is very old. By studying the layers of rock, we can find out about its past. That kind of research is called historical geology.. We know that living things have changed over time, because we can see their remains in the rocks.
