Zn₄O(BDC)₃, also called MOF-5, is a metal-organic framework in which 1,4-benzenedicarboxylate (BDC) anions bridge between cationic Zn₄O clusters. The rigid framework contains large voids, represented by orange spheres. MOFs can be made from many different transition metal ions and bridging ligands, and are being developed for practical applications in storing gases, especially H₂ and CO₂.

Chemistry is the natural science involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it provides ...

It is important to refer that, for marine waters, the US National Oceanic and Atmospheric Administration (NOAA) has recently published a technical memorandum containing numerous suggestions and procedural advices on the laboratorial methods for the analysis of microplastics in the marine environment, with specific recommendations for quantifying synthetic particles in both waters and sediments [].
