

## *Photosynthesis Cellular Respiration Answers Biology 1*

### **Photosynthesis Cellular Respiration Answers Biology**

Photosynthesis requires the input of water, carbon dioxide and sunlight to produce glucose. This glucose is then used in cellular respiration along with the input of oxygen to produce water, carbon dioxide and energy. They're not exactly opposite processes but, one of the ways they are would be that photosynthesis has the input of water and carbon dioxide whereas cellular respiration has the ...

### **Which of the following is one of the ways that cellular ...**

The correct answer is: they require organelles. Photosynthesis and cellular respiration are processes that need organelles for them to happen. The organelles are the place with the right machinery for these processes to occur.

### **Which is true for both photosynthesis and cellular ...**

Photosynthesis/ Cellular Respiration. Think back to plants for a second. Plants take energy (from the sun), water and carbon dioxide and turn them into glucose and oxygen.

### **What Is the Purpose of Cellular Respiration? - Video ...**

What Is Cellular Respiration? All living things need energy to survive. Without energy, our cells cannot function and our bodies shut down. Life cannot exist without this constant supply of energy.

This site serves as a resource site for students in Biology 1 & 1A. The goal of this course is to provide a general overview of major biological topics, provide opportunities for laboratory

investigations, and expose students to current advances in biology and medicine.

### **Biology 1 & 1A**

Credits: 1. Prerequisite: Middle school biology and chemistry. Recommended: 9th or 10th Test Prep: CLEP Biology This course covers the basic material for this exam, but this is considered a very hard test, and I would suspect more will need to be studied to learn everything required for this huge exam. It's worth the same as two college courses which is why it covers so much.
